EDUCATION

- ITMO University — MSc, Artificial Intelligence | St. Petersburg** 09.2026 – Present
- Two-year programme, state-funded place under the Russian Government Scholarship (Rossotrudnichestvo).
- Ural Federal University — BSc, Software Engineering (09.03.04) | Yekaterinburg** 09.2021 – 06.2026
- GPA 3.87 / 5.00. Coursework: algorithms and data structures, databases, operating systems, OOP.
 - Completed a 288-hour professional retraining programme in Embedded Systems Programming (2025).
 - State-funded place under the Russian Government Scholarship (Rossotrudnichestvo). Studied five years in Russian, including the preparatory faculty (2021–2022).

EXPERIENCE

- Web Developer — Freelance · React, TypeScript, Supabase** 07.2026 – Present
- Developed and shipped a booking site with an admin panel for the Otrazhenie photo studio on Supabase, replacing manual scheduling with online client registration.
 - Delivered a portfolio site with an admin panel for an Ozon marketplace store manager, letting the client manage content without developer involvement.
- Software Engineering Intern — VK Education Practice, VK (Remote) · Python, REST API, VK Bridge** 06.2025 – 01.2026
- Developed a VK Mini App during the internship, covering the client interface and the server side.
 - Implemented authentication via VK ID and VK Bridge, and persistence of user data through VK Storage.
 - Refactored state management and added asynchronous data fetching to keep the interface responsive.

PROJECTS

- FlipRU — Turkish and Russian vocabulary app (github.com/kayaal34/FlipRU)** Flutter, Dart
- Developed a dictionary of 8,000+ words across five CEFR levels (A1–C1) with stress marks, transcription and usage examples, for Turkish speakers learning Russian and Russian speakers learning Turkish.
 - Added a practice section with quizzes and exercises, plus a companion dictionary editor that flags duplicates, missing stress marks and empty fields; currently in closed testing on Google Play.
- Subscription Hunter — subscription tracker (github.com/kayaal34/subscriptionHunter)** Flutter, Dart
- Shipped to Google Play: charge dates, total spend and renewal reminders per tracked subscription.
- AI Trip Planner — graduation project, Ural Federal University (github.com/kayaal34/AI-Tripper-backend)** Python, FastAPI
- Owned the backend and LLM integration in a two-person team: a FastAPI service generating travel itineraries through the OpenAI API, orchestrated with LangChain.
 - Implemented route rendering via the Google Maps Directions API, returning a visual itinerary per request.
- TZ Reviewer — AI Product Hack, MTS case (github.com/kayaal34/aitalenthub-hackathon)** Python
- Developed a specification-review tool in a team of two: parses a technical spec into sections and returns findings at three severity levels (blocker / major / minor).
 - Cut LLM dependency by moving deterministic checks into rule-based logic, reducing token cost per review.
- Emotion Detection — facial emotion recognition (github.com/kayaal34/emotion-detection)** Python, TensorFlow
- Trained a model recognising emotional expressions from images: data preparation and labelling, training loop and evaluation of classification quality.
 - Implemented the full pipeline from raw images to prediction, comparing results across training runs to select the final model.
- Degerix — land valuation for Turkey (github.com/kayaal34/degerix)** Python, FastAPI, Leaflet · in progress
- Building a FastAPI service that locates a land parcel on the map through the Turkish cadastre (TKGM) API and estimates its value for three sale scenarios (urgent, market, patient seller) with a range and confidence level.
 - Integrated the cadastre, OpenStreetMap Nominatim and Central Bank (EVDS) housing statistics behind the backend: response normalisation, caching, rate-limit compliance, API keys kept off the client; pytest suite runs in GitHub Actions.
- Project-Based Learning — Ural Federal University (client: UrFU)** 01.2025 – 12.2025
- Developed a neural-network book recommendation assistant for a personal library system.
 - Built a VR simulation of historic Yekaterinburg buildings in a project team.
- Other projects** Python, PostgreSQL, C#, C++
- Shipped a Telegram market bot on Python and PostgreSQL sending morning and evening summaries of daily risers and fallers, replacing manual rate checks; a book-sharing app in .NET MAUI; a document-to-PDF converter; and a microcontroller stair-lighting system.

ADDITIONAL EXPERIENCE

Student Consultant — Sky Education | 09.2024 – 09.2025 — Supported Turkish students relocating to Russia across documents, admissions and university communication in Turkish and Russian.

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript, TypeScript, SQL
Backend: FastAPI, Pydantic, Alembic, REST API design, .NET / C#
Data: PostgreSQL, Supabase, Redis
Infra/DevOps: Git, GitHub Actions (CI/CD), pytest, Linux, Yandex Cloud (VMs, Serverless)
Mobile: Flutter, Dart
Frontend: React, HTML5, CSS3
AI: LLM integration (OpenAI API), prompt engineering, LangChain, TensorFlow, neural networks, computer vision
Familiar: Docker, Nginx, Kotlin, C++, embedded systems

CERTIFICATIONS, LANGUAGES, INTERESTS

Certifications: Cloud Services Engineer — Yandex Practicum (43 h, 11.2025); VK Education Practice — VK (2025); Web Technologies Fundamentals — HTML Academy (2024).
Languages: Turkish — Native; Russian — C1; English — B2.
Interests: Licensed taekwondo athlete, medals at city-level competitions.
